

1. Supplementary Figures and Legends

Supplementary Figure 1 – Concatenated topological comparison.

Mitochondrial (MIT) topology on the left from a concatenated dataset combining 12s, 16s, ND4, Cytb, and tRNAs with a total of 2668 bps. Mitochondrial + Nuclear (MITNUC) topology on the right with the combined MIT data and RAG1

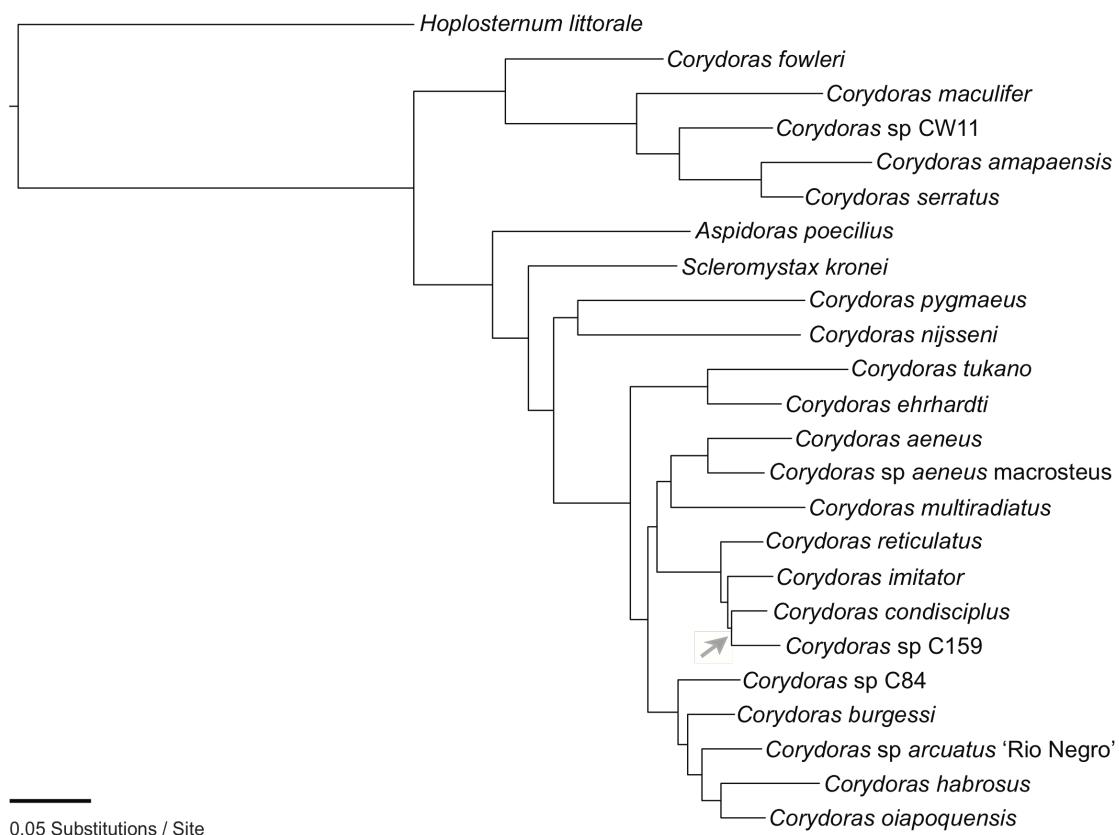

totalling 3424 bps. Analyses were fully partitioned with RAxML (500 bootstrap replicates) and MrBayes (30 million generations), for 425 taxa. Support values labelled for major lineage separations (Bayesian probabilities above, ML bootstrap consensus below). Lineages highlighted with respective colours and dotted lines denote topological differences between the two datasets.

Supplementary Figure 2 – Pruned Mitochondrial Tree

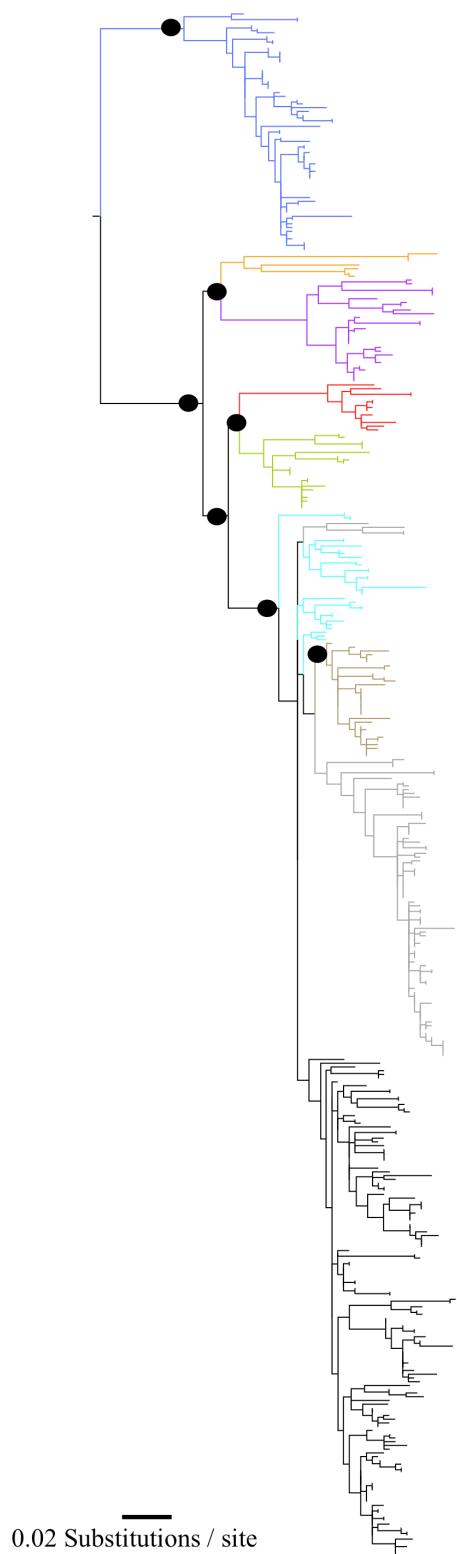

Mitochondrial topology constructed from a fully partitioned RAxML analysis (500 bootstraps replicates) and MrBayes (30 million generations) pruned to include a single representative per species (total 221). Branches with mimetic species are highlighted on the tree in black. Areas of support lower than 0.8 (BI) probability and 70% (ML) are denoted with a slanted grey arrow pointing to the node in question. All other nodes in the tree were well supported.

Supplementary Figure 3 - MITNUC2

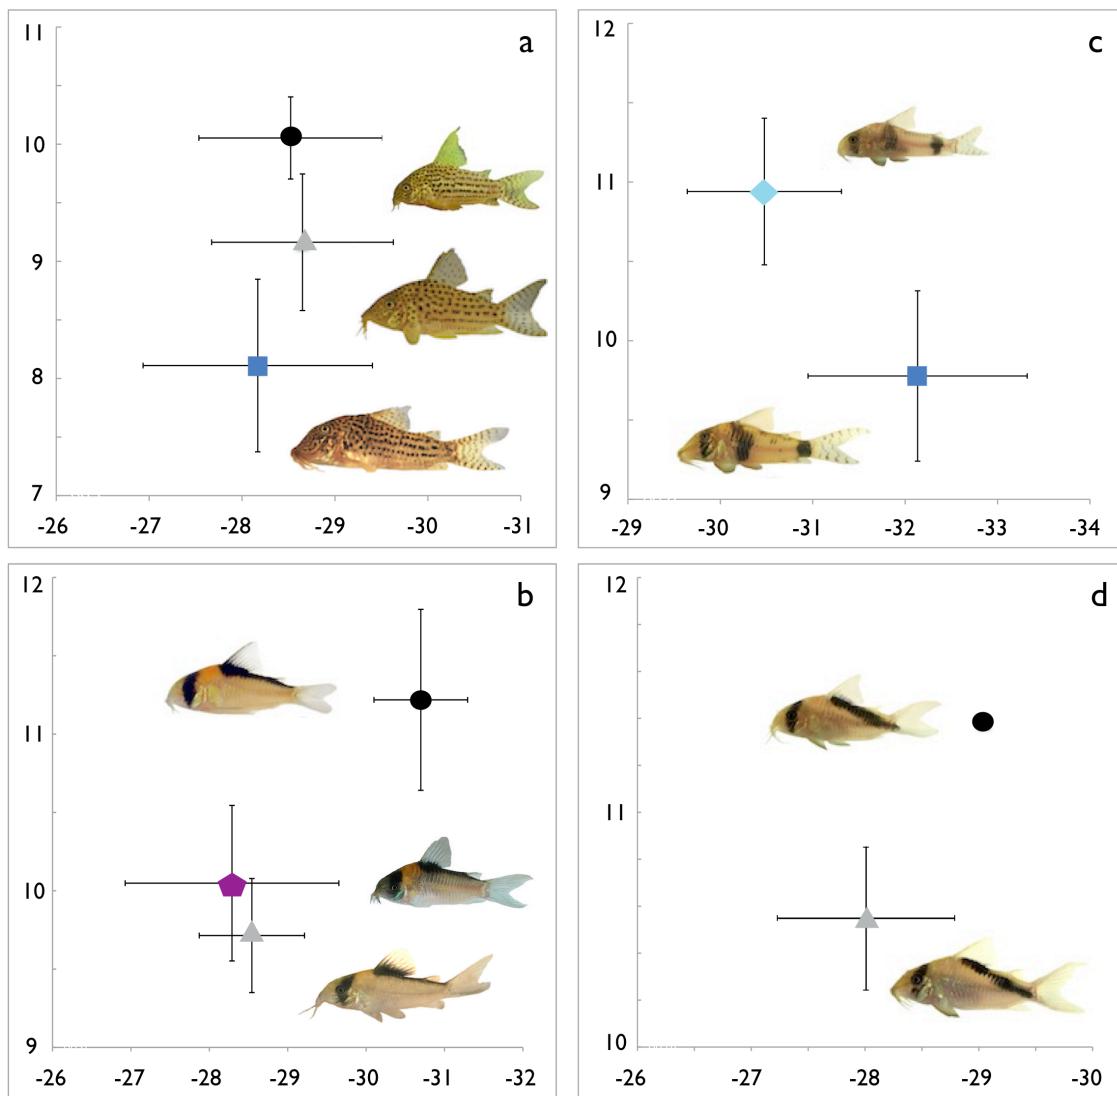

Topology constructed with RAxML (500 bootstrap replicates) from concatenated data (combined MITNUC with F-Reticulon 4) of 24 representative taxa and a total of 4095 bps (671bp FR-4 intron). Major areas of support weaker than 0.8 probability and 70% ML denoted with slanted grey arrow pointing to the node in question.

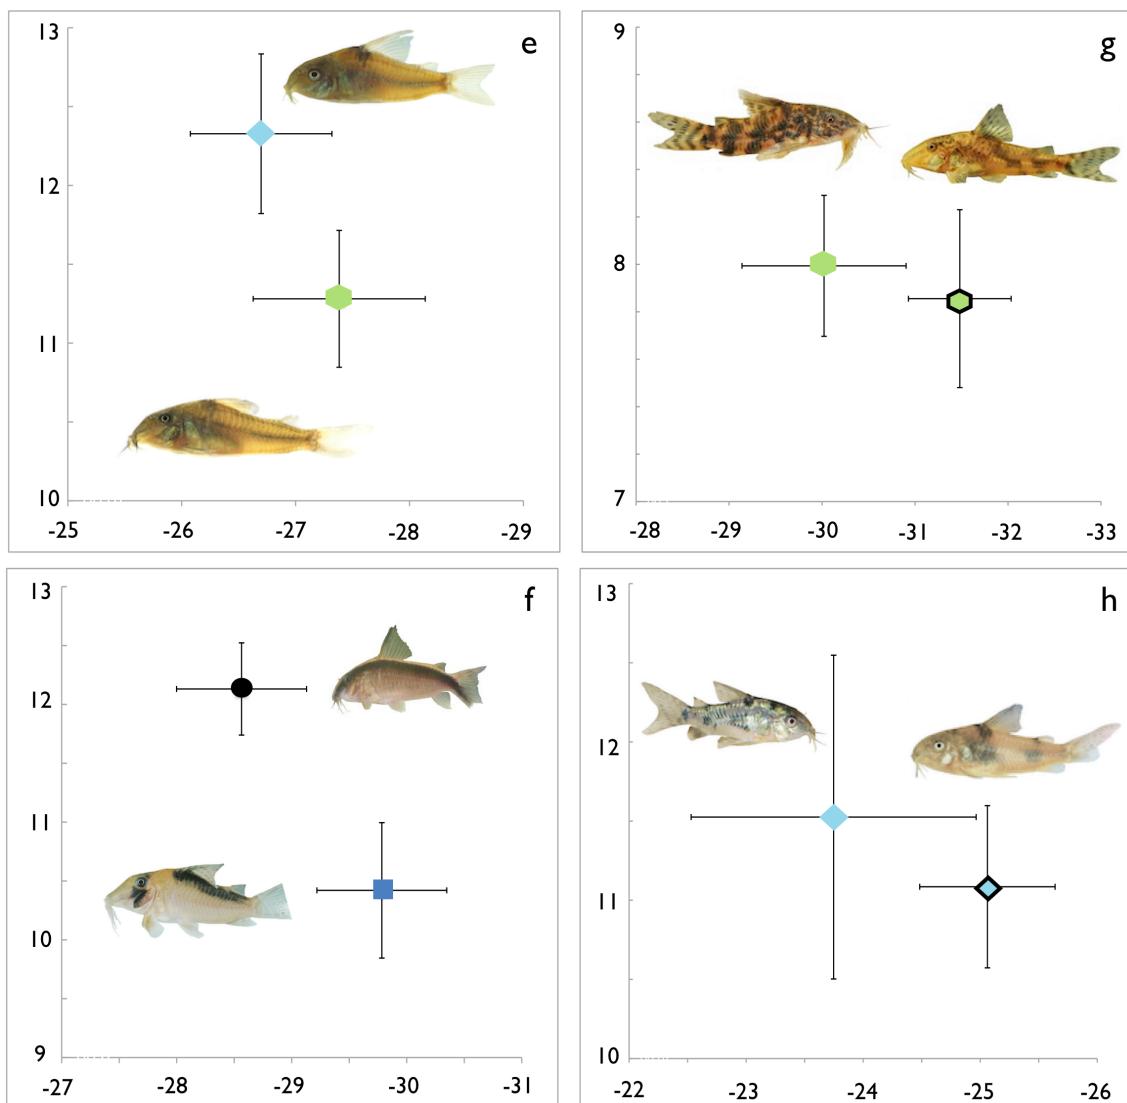

Supplementary Figure 4 – Rag 1 Tree

Topology constructed with RAxML (500 bootstrap replicates) and MrBayes (10 million generations) using 756 bps for 413 taxa. Lineages highlighted with respective colours and major areas of support greater than 0.8 probability and 70% ML denoted with black circles.

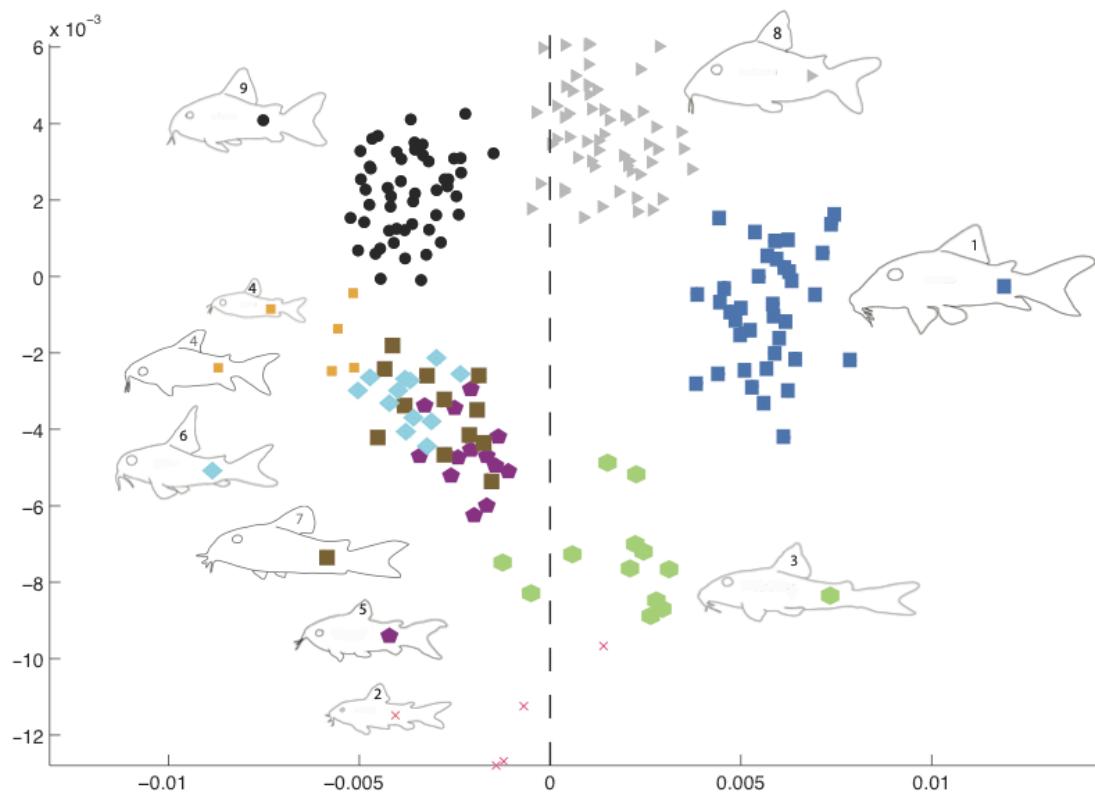

Supplementary Figure 5 – Stable Isotope Plots

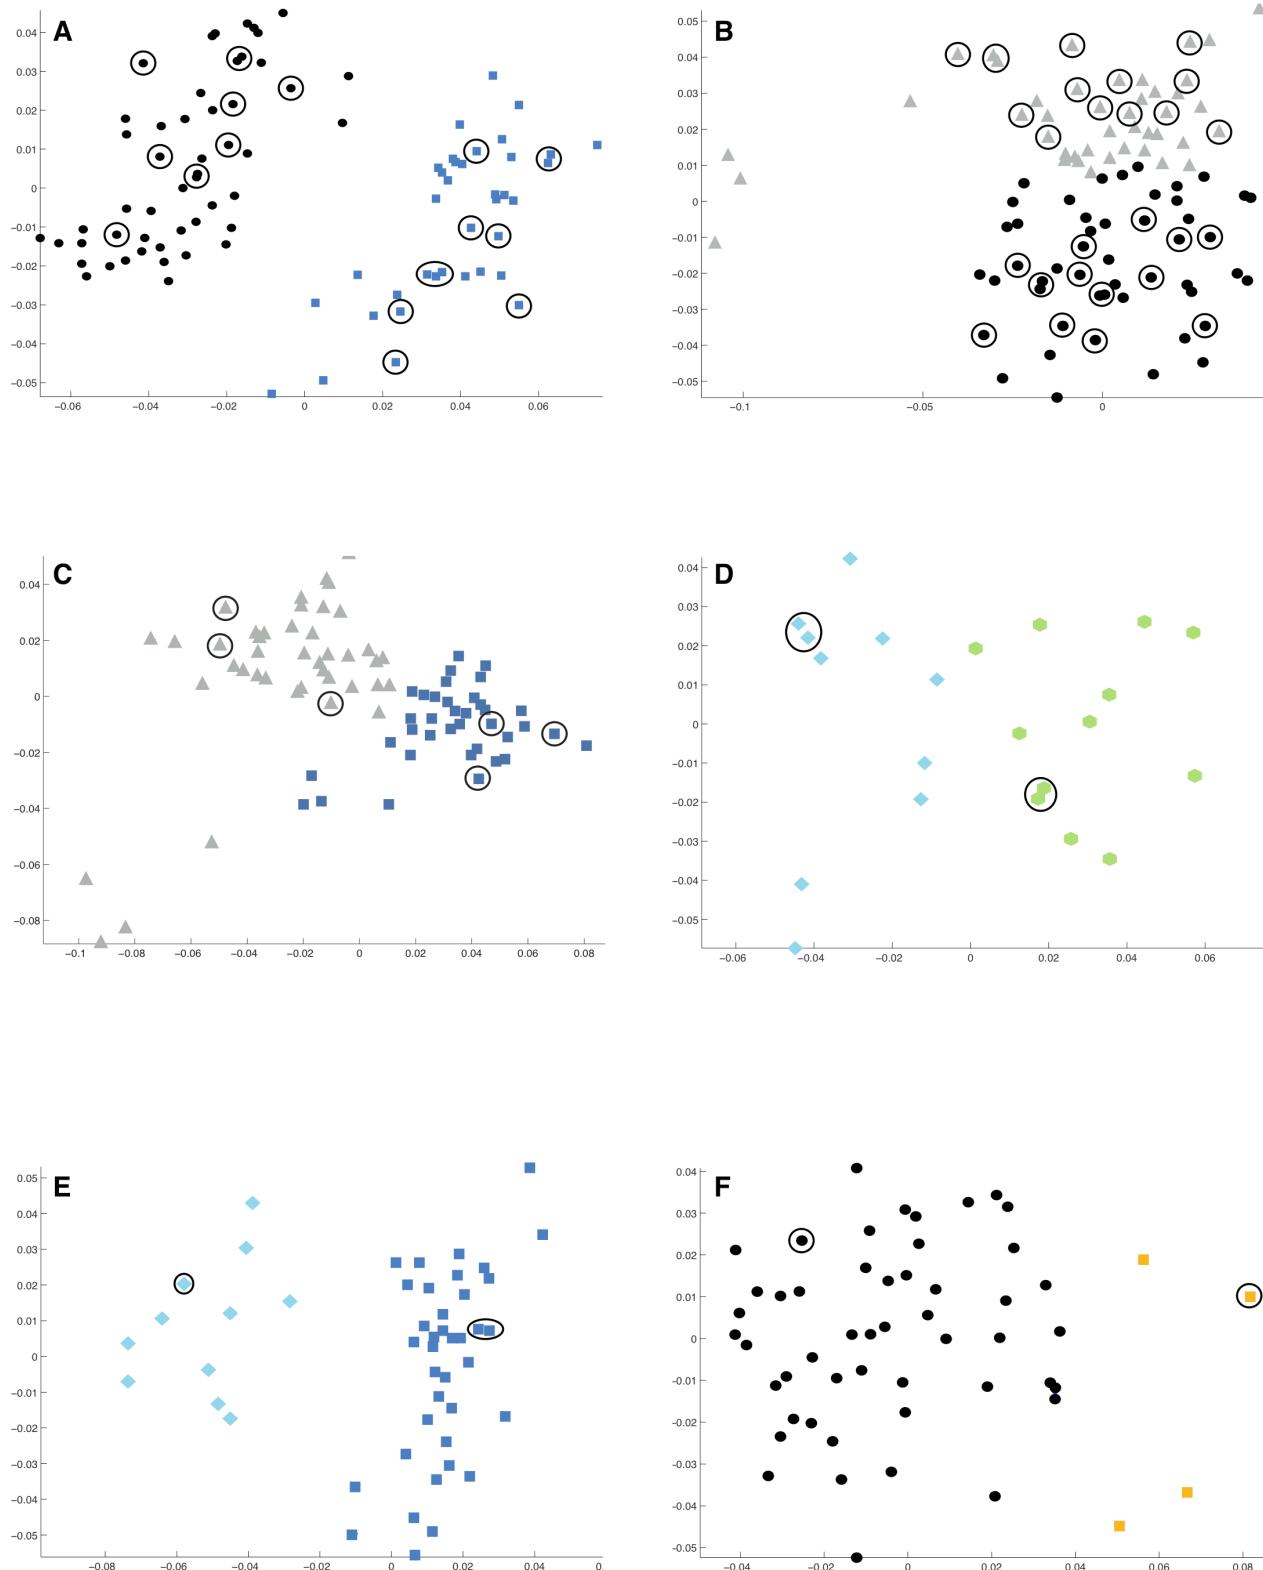

Mean ratios $\delta^{13}\text{C}$ on the x-axis and $\delta^{15}\text{N}$ on the y-axis. Species and respective symbols: a) ■ *C. maculifer*, ▲ *C. sp. C122*, ● *C. araguaiaensis*; b) ▲ *C. imitator*, ♦ *C. nijsseni*, ● *C. adolfoi*; c) ■ *C. sp. CW11*, ▲ *C. tukano*; d) ▲ *C. sp. C156*, ● *C. sp. C84*; e) ■ *S. prionotus*, ▲ *C. nattereri*; f) ■ *C. serratus*, ● *C. cf. arcuatus*; g) ■ *S. barbatus*, ▲ *S. macropterus*; h) ▲ *C. ehrhardti*, ▲ *C. paleatus*.

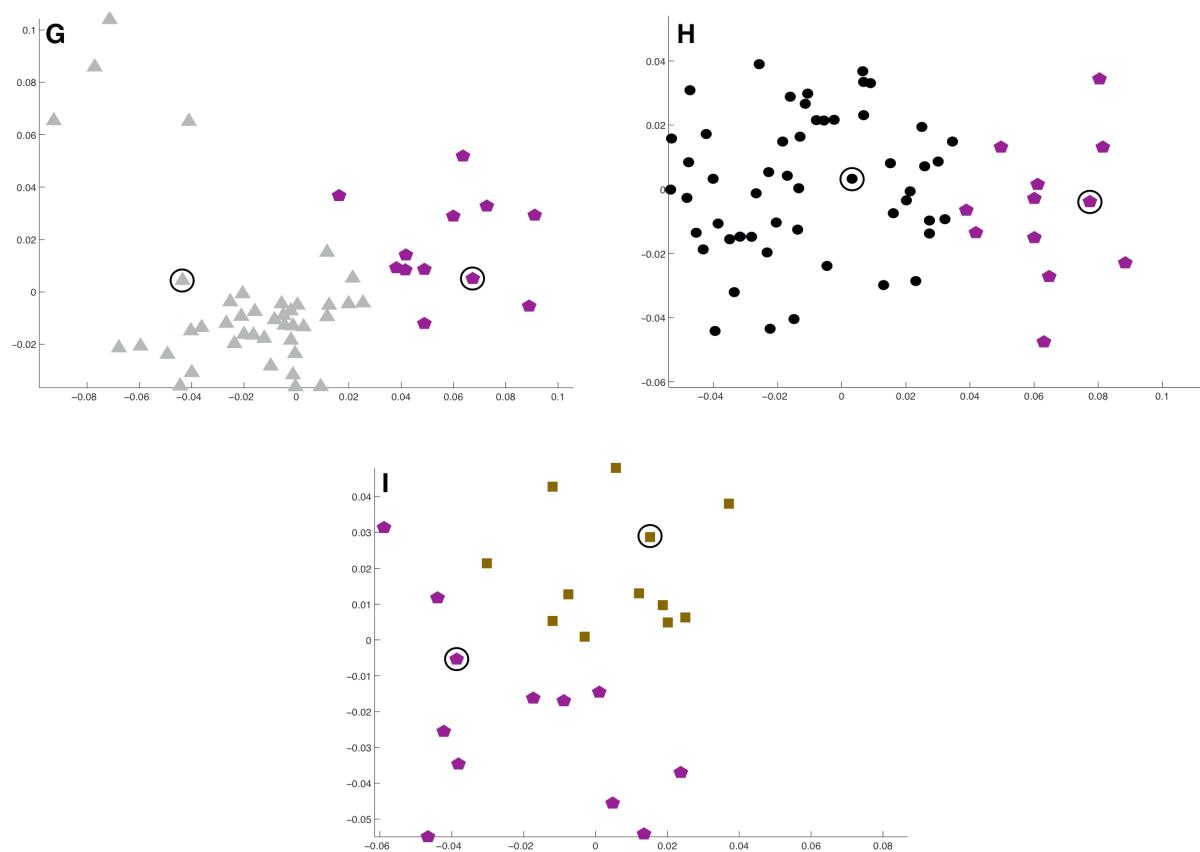

Supplementary Figure 6 - CVA Morphometrics

The CVA plot (vectors of CV coefficients scaled to a length of one) separates short snouts (Lineages 2, 4, 5, 6, 7, 9) and long snouts (Lineages 1, 3, 8) by a vertical axis (dotted line). Representative lineage number and shape marked on the outline of each respective group. Bartlett's test (CVA/MANOVA) revealed six significant axes of differentiation while an assignment test showed that taxa are grouped in their respective lineage with 99% accuracy.

Supplementary Figure – 7 PCA Morphometrics

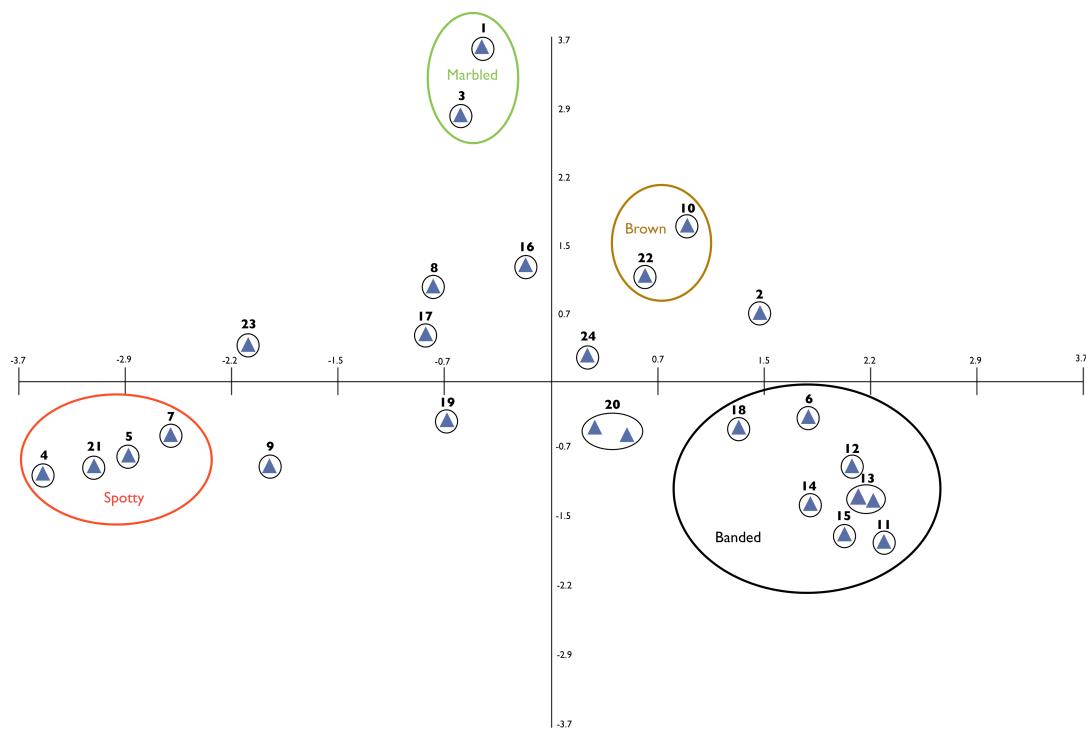

Scatter plot of the PCA axes scores between respective co-mimic lineages
 (Axes are PC1 (x) and PC2 (y) for all plots). Co-mimics being compared are
 highlighted with black circles. Different colours represent each respective lineage:
 A) Lineage 1 and 8, B) Lineage 8 and 9, C) Lineage 1 and 8, D) Lineage 3 and 6,
 E) Lineage 1 and 6, F) Lineage 4 and 9, G) Lineage 5 and 8, H) Lineage 5 and 9,
 I) Lineage 5 and 7.

Supplementary Figure 8 – Colour Patterns

PCA Euclidean Colour Distance

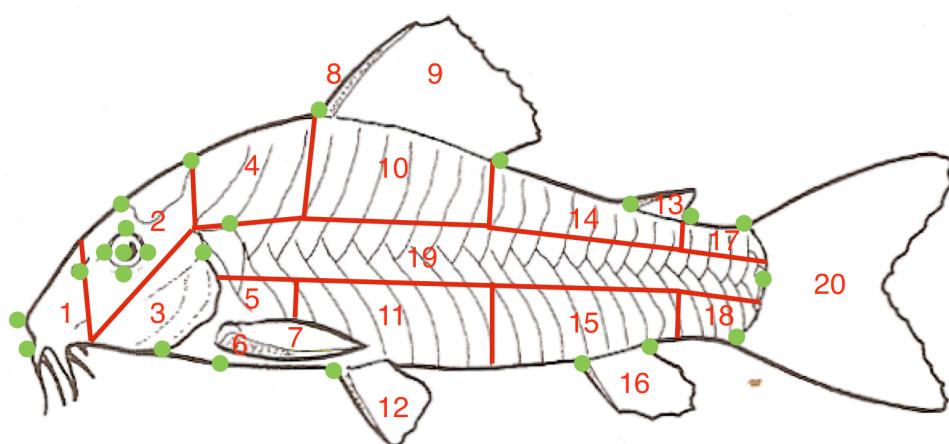

PCA plot showing similarity in colour within mimicry rings and differences between them. Each species is represented by a blue triangle, however only one is visible in most cases due to complete overlap of mimetic coloration. Mimetic groups circled with respect to greater pattern similarity (i.e. Marbled, Spotty, Banded, Brown), while intermediate patterns contain a variety of elements and therefore do not necessarily fit into the latter groupings. Species analyzed are listed by respective mimetic communities:

- 1) *C. paleatus*, *C. ehrhardti*; 2) *C. nattereri*, *S. prionotus*; 3) *S. barbatus*, *S. macropterus*; 4) *C. maculifer*, *C. sp. C122*, *C. araguaiaensis*; 5) *C. julii*, *C. sp. C109*; 6) *C. oiapoqueensis*, *C. condiscipulus*; 7) *C. sp. C135*, *C. sp. C136* 8) *C. evelynae*, *C. sp. CW13*; 9) *C. kanei*, *C. crimmeni*; 10) *C. sp. CW19*, *C. sp. CW26*; 11) *C. metae*, *C. simulatus*; 12) *C. imitator*, *C.adolfoi*, *C. njisseni*; 13) *C. serratus*, *C. cf. arcuatus*; 14) *C. narcissus*, *C. sp. CW6*, *C. arcuatus*; 15) *C. sp.*

C84, C. sp. C156; 16) C. sp. CW28, C. pulcher; 17) C. *trilineatus*, C. *leopardus*; 18) C. *tukano*, C. sp. CW11; 19) C. sp. C91, C. sp. C92; 20) C. *similis*, C. sp. C66, C. *ourastigma*; 21) C. *cruziensis*, C. *mamore*; 22) C. *gossei*, C. *seussi*; 23) C. *sterbai*, C. *haraldshultzi*; 24) C. sp. C76, C. sp. C77.

Supplementary Figure 9 - Colour pattern outline and landmarks

Areas selected, characters: 1) snout 2) upper posterior head / eye + nuchal plate 3) lower posterior head / gill plate 4) upper anterior body 5) lower anterior body 6) pectoral spine 7) pectoral fin 8) dorsal spine 9) dorsal fin 10) upper mid body 11) lower mid body 12) pelvic fin 13) adipose fin 14) upper posterior body 15) lower posterior body 16) anal fin 17) upper posterior caudal 18) lower posterior caudal 19) lateral section 20) caudal fin. Colour pattern characteristics scored as present (1), absent (0) or variable (0.5) for each of the 20 sections defined above were: a) contrasting bands (single band of colour either horizontally or vertically), b) reticulations, c) spots (small areas of pigmentation or lack of it, less than 5mm in diameter), d) blotches (large areas of dark pigmentation without clearly defined borders of shape, greater than 10mm in diameter), e) bright coloration (areas of bright coloration e.g. orange, yellow

etc), f) patches (very dark or black pigmented areas with defined borders and shape, greater than 10mm in diameter, g) stripes, h) uniform brown and i) light coloured surface lacking any dark pigmentation. A total of 24 homologous landmarks shown as green circles. The outline figure was modified from Nelson (2006), Fishes of the World.

2. Supplementary Tables

Supplementary Table 1 – Species List and Accession Numbers

Subfamily	Lineage	Genus	Species	Voucher Code	Drainage	ACC 12s	ACC 16s	ACC ND4	ACC Cytb	ACC Rag1	ACC FR4

Pairwise Goodall's F-test results (2500 bootstraps) comparing Mahalanobis distances between respective co-mimic lineages. *Distance between means.

Supplementary Table 4 - Primers

Locus	Primer Sequences	°C
12s	12sA-5 F (5'-AAACTGGGATTAGATAACCCCACTAT-3') 12sB-3 R (5'-GAGGGTGACGGCGGTGTGT-3')	58-60
16s	16sA5 F (5'-CGCCTGTTATCAAAAACAT-3') 16sBR3 R (5'-CCGGTCTGAACTCAGATCACGT-3')	53-55
ND4	L11935 (5'-CCA AAA GCA CAC GTA GAA GC-3') H12857 (5'-ACC AAG AGT TTT GGT TCC TA-3')	53-55
Cytb	GLU-Cory F (5'-CGACTTGAAAACCCATTGTTG-3') tRNA THr (5'-CCGGCGCTTATGAGTTAAG-3')	53-55
Rag1	Rag 1 MA F (5'AAGGAGAGGGTATAGATGATA3') Rag1 MA R (5'-GCAAAACGCTGAGAGTTGAA-3')	55
FR-4	RTN4-DG F (5'-GTYTGGYTGGTYRTGGTRAARCC-3') FRETICUL4-R2 R (5'-AARTCCATCTCACGCAGGA-3')	54

Primer sequences, sequence length and optimal annealing temperatures for the six markers employed in this study. Primers for the FR-4 intronic region were newly developed by Juan Montoya-Burgos, while new RAG1 primers were also developed specifically for the Corydoradinae.
